

# COLUMBARIUM PROJECTS

Serving the cemetery industry for over 40 years.

# CORDEIRO VAULT COMPANY

A family owned company in business since 1969 – our diverse experience, reputation for constructing a quality product, and the excellent service offered on a continuing basis has made Cordeiro Vault Company a recognized industry leader. Cordeiro Vault Company is responsible for constructing over 500 columbarium projects in Northern, Southern and Central California.

## INDUSTRY TRENDS

The death care industry has experienced major changes in the last decade and this trend will continue with cremation and cremated remains disposition becoming a primary priority of the cemetery industry.

## PRODUCT CONSTRUCTION

All Cordeiro niche products are made of high compression, quality concrete with steel reinforcement and an ABS plastic liner and protective cover to keep the cremated remains safe and dry. Our construction method makes certain that no metal from the precast unit comes in contact with the earth's environment. This concept prevents rust and unsightly discoloration from penetrating the marble or granite veneer over time.

## NICHE SIZES

Our standard niches offers a versatile interior dimension of 9 1/2" x 9 1/2" x 10" or 903 cubic inches. This niche is large enough to accept a quality urn if the family desires. It is also large enough to accept two cremated remains, using properly configured economy urns. Grieving families appreciate this option and it gives the cemetery another price point to present to their client. The outside shutter is approximately 11" x 11" which allows ample space to place one or two names with dates of birth and death.

We offer an economy single niche with an interior dimension of 6" x 6" x 7 1/2" or 270 cubic inches. This size is useful in maximizing the number of cremated remains placed in a given area. The 7 1/4" x 7 1/4" outside shutter allows ample space to attach a small niche plate and bud vase.

We also offer the economy niche with tandem capabilities. This unit has an interior dimension of 6" x 6" x 14 3/4" or 531 cubic inches. Cemeteries like the option to place two cremated remains in this unit with economy urns. This concept truly maximizes the space used for cremated remains placement. The

7 1/4" x 7 1/4" shutter allows both names to fit on bronze niche plate, along with dates of birth and death.

## PROJECT INSTALLATION

Cordeiro Vault Company retains the services of a general contractor with 30 years of experience in cemetery construction. Our goal is to make each project a work of art and in the process create an eternal memorial for each family and feature that the cemetery can show with pride for many years to come. Most installations are completed in 5-15 working days depending on the size and complexity of the project. We take great care to make sure that normal cemetery routines are not interrupted during the installation process. Each project is custom to your specifications and overseen by our master craftsman.

## NEW PROJECT COUNSELING

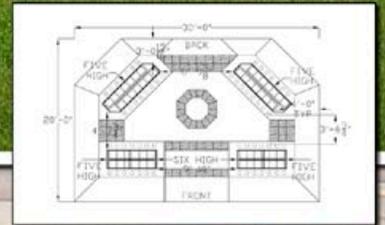

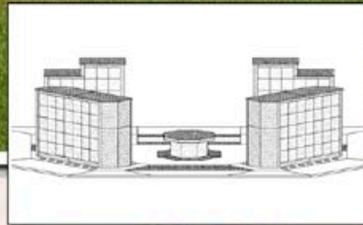

Our representative, with 38 years of industry experience and involvement in over 800 columbarium projects will visit your cemetery and discuss the ideas you present. He will then determine if there are other options or ideas you might consider for your proposed project. We will submit Computer Aided Designs (CAD) for your review at no cost or obligation. The next step will be to determine the best option for the cemetery and create a bid proposal for consideration by the manager and board of directors. Our representative is available for a board presentation to discuss the proposed bid and review the proforma to illustrate the financial viability of the project. We have three major objectives with each project: build the best quality columbarium available, custom install the project to master craftsman standards, and make the project attractive with aesthetics pleasing to your clientele.

## PRICING YOUR PROJECT

Our company representative is also available to assist you in determining a viable pricing structure for your project. His diverse experience in the industry can lend valuable information as you make your final plans for the project.

"THOSE WE HAVE HELD IN OUR ARMS FOR A LITTLE WHILE,

WE HOLD IN OUR HEARTS FOREVER."

## PRODUCT FLEXIBILITY

The Cordeiro Niche concept gives the cemeterian or church tremendous flexibility in project configuration. We have the ability to make curved or circular units to meet your specifications. Free standing rectangles, triangles, diamonds, squares, as well as straight walls can be constructed with ease. Attachment to existing retaining walls, mausoleums, or other buildings is another option to consider. Most configurations can be constructed to accept features such as statues or emblems. Many projects are constructed around an existing feature such as a waterfall, serene pool, patriotic flag pole, veterans memorial, etc.
